ABOUT ME

An enthusiastic and detail-oriented engineering student with a keen interest in software development, circuit design, and embedded systems, skilled in integrating hardware and software. With hands-on experience in developing innovative electronic and IoT solutions, this student is passionate about creating real-world applications that combine programming, sensor technology, and microcontrollers. Proficient in problem-solving, collaborating on project teams, and exploring emerging technologies to boost system efficiency and performance.

EDUCATION

2023-2027 **KLN College of Engineering**

Bachelor's of Engineering CSE(Internet of Things) |Till semester : 05 CGPA:8.23

2022-2023 **K C M Matric Higher Secondary School**

HSC with 85%

PROJECTS

IoT-based Smart InteliPole

1.Built a Raspberry Pi–based smart street pole integrating adaptive street lighting, environmental monitoring, and AI-driven accident detection with automated alerts for smart city applications.

2.Created a low-cost, modular prototype architecture that can be easily extended with additional smart city features in future iterations.library

IPL Dashboard Analysis

1.IPL Analysis Dashboard(Power BI)

2.Designed an dashboard that useful to analysis each player status , value and thir availability

Line Follower Robot

Developed an autonomous Line Following Robot using IR sensors and Embedded C for real-time path detection and motor control.

Home Automation

Developed a ESP32-based Smart Home Automation System with Relays , touch sensors in my Internship at Tarcin Robotics .

Edge Sentinel

Developed Edge Sentinel, an AI-powered edge surveillance system integrating computer vision, IoT, and embedded computing for real-time threat detection and monitoring.

SKILLS

Programing Language: Python, C , Java

Technical Concepts: Robotics &IoTDSA ,My-SQL ,OOPS,

Tools: Power BI,Tableau,VS code,GitHub

ACHIEVEMENTS

- Won 1st prize in MEDXPERIA 2024 technical poster presentation at PSNA College of Engineering and Technology.
- Won 3rd prize in Balsu's Business Quiz Competition 2025.
- Won 2nd prize in technical paper presentation 2025 at KLN College of Engineering.
- Won 2nd prize in NextGen Innovators 2025 event at KLN College of Engineering.

EXPERIENCE

IoT & Robotics Intern
Tarcin Robotics | December 2025 – June 2026

- Selected as an IoT & Robotics Intern for a one-month internship in December 2025.
- Earned a six-month internship extension (January–June 2026) based on outstanding technical performance and contribution to IoT and robotics projects.
- Developed and tested IoT-based automation solutions using ESP32, sensors, and embedded systems.
- Programmed and debugged embedded firmware in Embedded C/Arduino for real-time hardware control.
- Integrated sensors, actuators, and communication modules for smart automation applications.
- Performed hardware prototyping, circuit integration, testing, and troubleshooting to ensure reliable system performance.
